

ABSTRACT OF THE DISCLOSURE

This invention has as its object to provide an image processing environment which allows the user to stop only a specific job by simple operation, and has high operation efficiency and operability.

When the user instructs to stop a job by a `stop` key on a console (3000) during job execution, a job manager (Job Manager) implemented by a CPU (2001) pauses all jobs which are being executed, displays a list of all the paused jobs on the console (3000) using their job IDs, prompts the user to select any of the jobs displayed in the list, and stops only the selected job.
